

# Bicycle Master Plan

## PROJECT OVERVIEW

The City of Hawaiian Gardens is developing a Bicycle Master Plan for the first time. During its development, the City will study streets and paths to identify design elements that help improve safety and mobility needs. The Plan will also help improve bicycle connections with neighboring cities and prioritize proposed improvements. Once complete, the Plan will serve as a roadmap to improve bicycle safety and infrastructure in the city for the next 10 years.

## Why is the Bicycle Master Plan Important?

The Bicycle Master Plan will help the City identify challenges with bicycle travel today and propose improvements that will make Hawaiian Gardens a safer and more comfortable place to ride a bike. It will also increase the City's chances of securing additional funding for these improvements.

The Bicycle Master Plan also benefits the community in many ways including:

Improving safety for current and future bicycle riders of all ages and abilities

Reducing car dependency

Encouraging more physical activity

Improving connectivity and access to destinations across the city

### SPRING 2024

#### Visions and Current Conditions

Learn about the project, share your biking experience, and establish project goals

### FALL/WINTER 2024

#### Future Network and Policies

Provide feedback on the proposed network and identify key projects and programs

### SPRING/SUMMER 2025

#### Implementation and Priority Projects

Tell us which type of improvements are most important to you
